

# ACADEMY ROOM ADD-ON FOR MORE THAN 12 USERS

**VSight Remote** goes far beyond a classic videochat tool for meetings. Since **VSight Remote** enables particular problems e.g. on machines to be solved with remote support, the video stream quality is of utmost importance. Since every additional participant exponentially increases the amount of data to be transferred and hence also affects the quality, the max. number of users per standard remote session is limited to 12 (ULTIMATE license). However, more and more VSight customers requested a higher user capacity, as they wanted to conduct e.g. remote training sessions or remote acceptance test with several participants, using the **VSight Remote** platform.

## ACADEMY ROOMS, ACCOMODATING 12 PUBLISHERS AND 100 ADDITIONAL PARTICIPANTS

Our **ACADEMY ROOMS** were specifically developed for training purposes and can accommodate **12 publishers** and **100 additional participants**. Up to 12 audio/video streams can be published in parallel and 100 additional participants can follow with their microphones and cameras switched off. The appointed host can activate and deactivate individual audio/video streams and e.g. unmute individual participants who digitally raised their hands in order to ask questions.

Due to the higher deployment costs resulting from an increased amount of data and required processing power, our academy rooms are billed according to hourly contingents that can be purchased in packages. Pretty much like booking a real physical classroom in a hotel to conduct your training.

## BENEFITS

- ◆ **Ideal solution** for trainings and large acceptance tests with multinational participants
- ◆ **Equipped with** all machinery-related advantages of the VSight Platform (e.g. AR+, 3D models, annotations, snapshots, chat translation, recording & documentation)
- ◆ **Recording function** for unlimited replays (ULTIMATE license)
- ◆ **Additional features:** Pin window to ensure the same view for everyone / mute other users
- ◆ **Minimize expenses:** Pay only the hours you use, plus reduce your travel costs
  - »» Train your staff or customers remotely and document all your instructions
  - »» Hold on-the-job trainings virtually and remotely

## USE CASE - EXEMPLARY ACADEMY ROOM SETUP

Our customers often use their 4 standard audio-/video streams for 1x expert (=trainer/moderator), 1x service technician, 1x camera on the entire machine, 1x camera on the control panel. Additional audio-/video streams can then be activated for questions from participants, who are actively selected by the host upon request.
